Excerpt: . . . area of an entropy diagram gives thermal units. For the method of drawing it see the paper already referred to, and M. Boulvins book, vol. iii. , p. 41. Captain Sankey determines each point from the intersection of the lines of equal pressure and equal volume. The term entropy d 0 was first adopted by Clausius to denote the integral. The method of drawing entropy diagrams is first claimed for M. Belpaire in 1872, and is described by Schottler (p. 109), who lays down clearly the difference between the diagrams of heat and of pressure, and by Professor Zeuner. In England the subject has been treated by Mr. Macfarlane Gray, who calls entropy the i p diagram. Professor Stodola says that by means of Combustion at constant jtrssurt l 1--l l l l l l. -t l Horizontal Scale of Entropy. To the engineer it affords the best way of handling the science of thermodynamics. German scientists have derived from it a new word, namely, heat toning, which may be described as the excess of energy set free See Proceedings of the Institution of Mechanical Engineers, July, 1889. by chemical combination, the final products being cooled to the same temperature as the original.
