The Nature of Unidentified Galactic High-Energy Gamma-Ray Sources: Proceedings of the Workshop Held at Tonantzintla, Puebla, Mexico, 9-11 October 2000 (Paperback)

By -

Springer, Netherlands, 2012. Paperback. Book Condition: New. 240 x 160 mm. Language: English . Brand New Book ***** Print on Demand *****.The Energetic Gamma-Ray Experiment Telescope (EGRET) instrument on the Compton Gamma-Ray Observatory left as a legacy its Third Catalog of High Energy Gamma-Ray Sources, whose detections include a large number of blazars, some pulsars, the Large Magellanic Cloud and a solar flare. Most of the newly discovered objects - a majority of the catalog - are unidentified sources, with a clearly predominant Galactic population. Are all these radio-quiet pulsars, like Geminga, or is there a novel type of celestial object, awaiting identification? In spite of the limited angular resolution provided by EGRET and COMPTEL, there is still much to learn about unidentified γ -ray sources: correlation studies, multiwavelength observations and theoretical work can provide valuable clues, specially if these efforts are carried out in a coordinated manner. The aim of this workshop, held from October 9 to 11, 2000, at the Instituto Nacional de Astrofísica, Óptica y Electrónica, at Tonantzintla, Mexico, was to gather experts on the subject, including observational astronomers specialized in other regions of the electromagnetic spectrum, in an effort to address the question of the...
