AN ELEMENTARY TREATISE ON ORTHOGRAPHIC PROJECTION AND ISOMETRICAL DRAWING

RareBooksClub. Paperback. Book Condition: New. This item is printed on demand. Paperback. 26 pages. Dimensions: 9.7in. x 7.4in. x 0.1in. This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1864 Excerpt: . . . of Fig. 54. headers, the next of stretchers, and so on. Fig. 54 exhibits the Flemish method, where the bricks in each layer are alternately headers and stretchers (See Fig. 108). Art. 72. The two Figures are drawn to the same scale, namely y, which I have constructed at Fig. 53. Take a b one inch long, and divide it into 10 equal parts. Then, since the whole represents 30 inches, each division will express 3 inches. Produce a b to c, and make a c equal to 2 divisions in a b. Divide the last division in a c into two equal parts. We are thus enabled to tiike off all the dimensions. From 0 to 3 represents the thickness of a brick; from 0 to 4, the breadth; from 0 to 9 the length; and from c to b the height of the wall, 3 feet. The portion of the scale from to c might be dispensed with, however. The manner of drawing the bricks is shown at Fig. 53, and should be adopted in practice. Problem 17 Given (he sectional plan of a building, to find its i sectional elevation. Art 73. Having drawn the sectional plan, Fig. 55, as explained in the preceding articles, take the section on the line a b. When the portion of the plan on the side of a b nearest the eye is supposed to be removed, the part remaining will appear in elevation as shown in...
